PROMPT EXECUTION BEST PRACTICE FOR MAXIMUM ACCURACY:

Always provide full source context inside <source_text> XML tags. Use Claude 3.5 Sonnet for analytical reasoning, and never execute multiple un-batched tasks in a single prompt turn. Let the model follow sequential steps.

SECTION II: AUTOMATION WORKFLOWS & API INTEGRATION RECIPES

Deployment Playbook for Private Practice Physician & Clinical Director • Zero-Code & API Orchestration Architecture

Automation 1: EMR Dictation to Structured SOAP Note Converter

Tooling Stack: Whisper AI / Apple Dictation + Claude API + EHR Export Trigger Event: Clinical audio dictation completed post-consultation

Execution Steps:

- Transcribe raw clinical audio.
- Structure automatically into Subjective, Objective, Assessment, and Plan (SOAP).
- Output CPT E/M coding complexity justification (Level 3 vs 4).

MANDATORY NEGATIVE CONSTRAINTS & HALLUCINATION DEFENSES:

1. Never accept un-cited quantitative claims or synthetic citations in legal, medical, or financial prompts.
2. Enforce explicit refusal protocols: if source documents lack necessary data, model must output [INSUFFICIENT DATA].
3. Always specify target audience, role perspective, and explicit negative constraints before executing queries.
4. Never share confidential company identifiers without de-identification tokens (e.g. [COMPANY_X]).
